

MACLEAY TERRACES

TURNER, ACT

- Lead Consultant
- Project Feasibility
- Urban Planning
- Landscape Architecture
- Design Detailing & Management
- Placemaking

SPACELAB was engaged as lead consultant to undertake a site feasibility & masterplan for this site & its required interaction with a neighbouring site. Our review generated detailed 3D modelling which then formed the brief for the architectural team.

SPACELAB conducted community consultation & stakeholder engagement, producing the Development Application, landscape masterplan design & construction documentation for an integrated residential development located at 10-12 Macleay Street, Turner. The proposal consisted of a total of 12 multi-level terrace homes across two blocks, associated open space and vehicular access works.

Working with the planners, an innovative design outcome of an integrated development was proposed, where each block owner developed their block with a common open basement driveway arrangement shared between the two.

SPACELAB worked in conjunction with two separate architects on the project, each designing different unit typologies for their respective blocks. **SPACELAB**'s landscape design for the site integrated the different architectural designs with a seamless landscape across the site.

"SPACELAB's competency in design & approval of this typology is high level. We will work with them on future projects." Kieran Fordham – Lockbridge
