

WOVA

PHILLIP, ACT

- Landscape Architecture
- Mixed-use Residential
- Building Information Modelling (BIM)
- Development Application
- Urban Design

SPACELAB has been engaged by GEOCON to progress the landscape design from the development application stage through to construction for the WOVA precinct.

The ground floor amenity plaza includes extensive green landscaped spaces with pedestrian linkages, seating nodes and thoroughfares that seamlessly connect the four tower buildings and the surrounding streetscape.

SPACELAB is working in collaboration with various other project consultants to deliver the works using cloud-based Building Information Modelling (BIM) software, providing a new level of interaction and coordination between disciplines. Extensive 3D modelling is being undertaken to create a consistent and complete model-based design.

WOVA is due for completion in 2024.
