

SAM WOODS

URBAN DESIGNER

Qualifications:

Bachelor of the Built Environment (Architecture)

Affiliations:

Master Building Association of Australia

Contact:

sam@spacelab.net.au | 02 6262 6363

Sam is passionate about urban design as it represents the fabric and foundation of the urban environment. Well considered urban design intersects and improves the lives of those around it. Sam's foundation in architecture provides a wide understanding of built form and its human interaction with the environment. Sam has a broad expert level of the use and application of new technologies and programs to view and create the built environment.

The mix of competencies Sam brings to his project work have been a great benefit to our clients. Sam's modelling has formed the basis and brief to architects and other urban designers on a diverse range of projects from small scale residential all the way to large-scale mixed-use projects.

When not working, Sam enjoys playing volleyball, cooking (and eating) and watching what most of us would call really bad B grade movies...
