

GOOGONG NH 3-5 Structure Plan

GOOGONG, NSW

- Estate Layout
- Structure Plan
- Masterplanning
- Site Analysis
- Tree Assessment & Management

The **SPACELAB** team immersed themselves on site to imagine, conceive and deliberate a forward-looking vision of a suburban community within the context of its flowing topography. We then ran an inhouse competition between two urban design teams and presented both designs to our client. The result was our client selected the design configured by our Director of Projects as lead designer and detailed by a junior urban planner.

This design offered a strong visual and physical connection to the unique environment in which Googong is located. **SPACELAB**'s design acknowledged the site's natural constraints and turned these constraints into opportunities to add texture and connection to the estate design.

Our interpretation and understanding of the undulating topography and how best to transform a hillside into a functional and liveable suburb through coordinated planning and engineering, saw the development yield maximised, and transformed into a liveable urban space surrounded by native forest.
