Sam is an architecture graduate who is passionate about urban design and the creation of the built environment. He has worked on intimate small scale projects while gaining experience on larger scale urban design projects.

At **SPACELAB**, Sam uses his design skills and works creatively on a wide array of projects. This includes coordination with project stakeholders and consultants ensuring the best design and client outcomes. Sam uses his architectural background to inform his urban design work and to design at the human scale to provide well considered spaces for interaction and living. Sam uses his BIM and drafting skills on an array of projects in the urban realm in a variety of scales from design inception to whole estates which are currently under construction. Throughout his work, Sam has been able to mix his competencies in design with a personable nature to allow for a successful relationship between designer and client.

Sam has worked on multiple, large scale, urban design projects in which he has designed built form outcomes that provide liveable outcomes for the end user. The skills he has from working on these large scale, urban design projects allow him to design for the built product succinctly and successfully from the initial stage of any project. Sam also works alongside and engages heavily with our landscape design team to integrate natural elements into our urban design wherever possible allowing for cohesion of design and intent across stages and facets of our designs. Having completed an undergraduate in Architecture and currently studying his Masters, Sam brings theory and design schooling into the projects he works on while providing a realistic review and consideration to his body of work. Sam has a broad knowledge on the innovative technologies that are used in the design of the built environment, allowing for interesting ways to view and coordinate projects among teams and clients.

Sam enjoys spending time with his labrador, riding his motorbike, and various artistic pursuits such as painting and cinema.
