- Landscape Architecture Design
- Concept Masterplan
- Nature Play Elements
- Playground & Open Space Design
- Collaborative Design Consultation

St Mary's Primary School approached the **SPACELAB** to provide landscape design services for a new outdoor play area.

The students, teachers and stakeholders were particularly interested in introducing natural play elements and materials which would coordinate with a plan to further develop indigenous gardens around the play spaces. Incorporating proposed play equipment and layout information provided by the school's Playground Committee, **SPACELAB** provided sketch plan options for consideration and comment by school stakeholders.

The design features native sensory plantings and natural materials as play elements, distributed throughout the site as activity pockets, including a large multi-use play structure in sand, tunnels, embankment slides, lounging/hang-out decks, and circuit paths over a dry creek bed. Stage 1 construction was completed in 2020.
